

Industrial visit report

31st January 2019

Unique Forging (India) PVT.LTD. Vitthal Udyognagar.

On the 31st of Feb, we had an industrial visit at Unique Forging (India) PVT. LTD. V. U Nagar, which is basically into the works of forging and manufacturing different types of components which were used for variety of sectors like automobile, railways etc. We reached the industry at around 10:50 a.m. and after a quick introduction of the faculties and the students, we were given the safety equipment before going inside the plant. The plant is divided into different sections depending on the type of the work or the process being conducted there. We were then guided by industry persons of the particular manufacturing units. There were various types of processes going on simultaneously and we were instructed about each process and it's working. We also talked to some of the workers about the process they were doing and the part they took in the process. After that we gathered for a group photo with the associates of the company and around 12:30 p.m. we left the industry and came back to the college. Overall, the industrial visit was worth productive and quite interesting as well for all the students as it helped us in understanding the processes.

The company normally offers their services to the following industrial sectors:
