Conclusion

Networking Your Way To A Successful Career, which was an alumni talk of one hour saw around 80+ students aspiring to learn networking. The main motive of this event was to organize fruitful discussions and informative sessions for students on the topics that are of utmost relevance to them in future.

Computer networks help users on the network to share the resources and in communication. Networking also helps the network users to share data files, Users can share devices such as printers, scanners, CD-ROM drives, hard drives etc. Without computer networks, device sharing is not possible. Applications can be shared over the network, and this allows clients to implement client/server applications. Networks allow users to communicate using email, newsgroups, and video conferencing etc. A lot of network games are available, which allow multi-users to play from different locations. Voice over Internet Protocol is a revolutionary change in telecommunication which allows to send telephone calls using standard Internet Protocol rather than by traditional PSTN.

Computer networking enables employees to share ideas more easily and work more efficiently. It increases their productivity and generates more income for the company. More importantly, computer networking improves the way companies offer their services to the world.

With Networking Your Way To A Successful Career, everyone who was a part of it left with a sense of satisfaction, loads of knowledge and clarity about the matter at hand.
